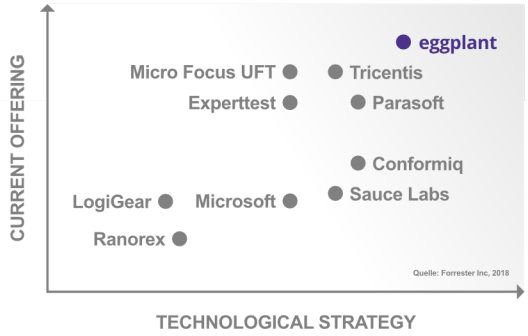
MENTOPOLIS

eggplant based

TEST AUTOMATION SOLUTION

WHY EGGPLANT?

- Strategic TA leadership
- Leading global references
- Technology-independet (platform und devices)



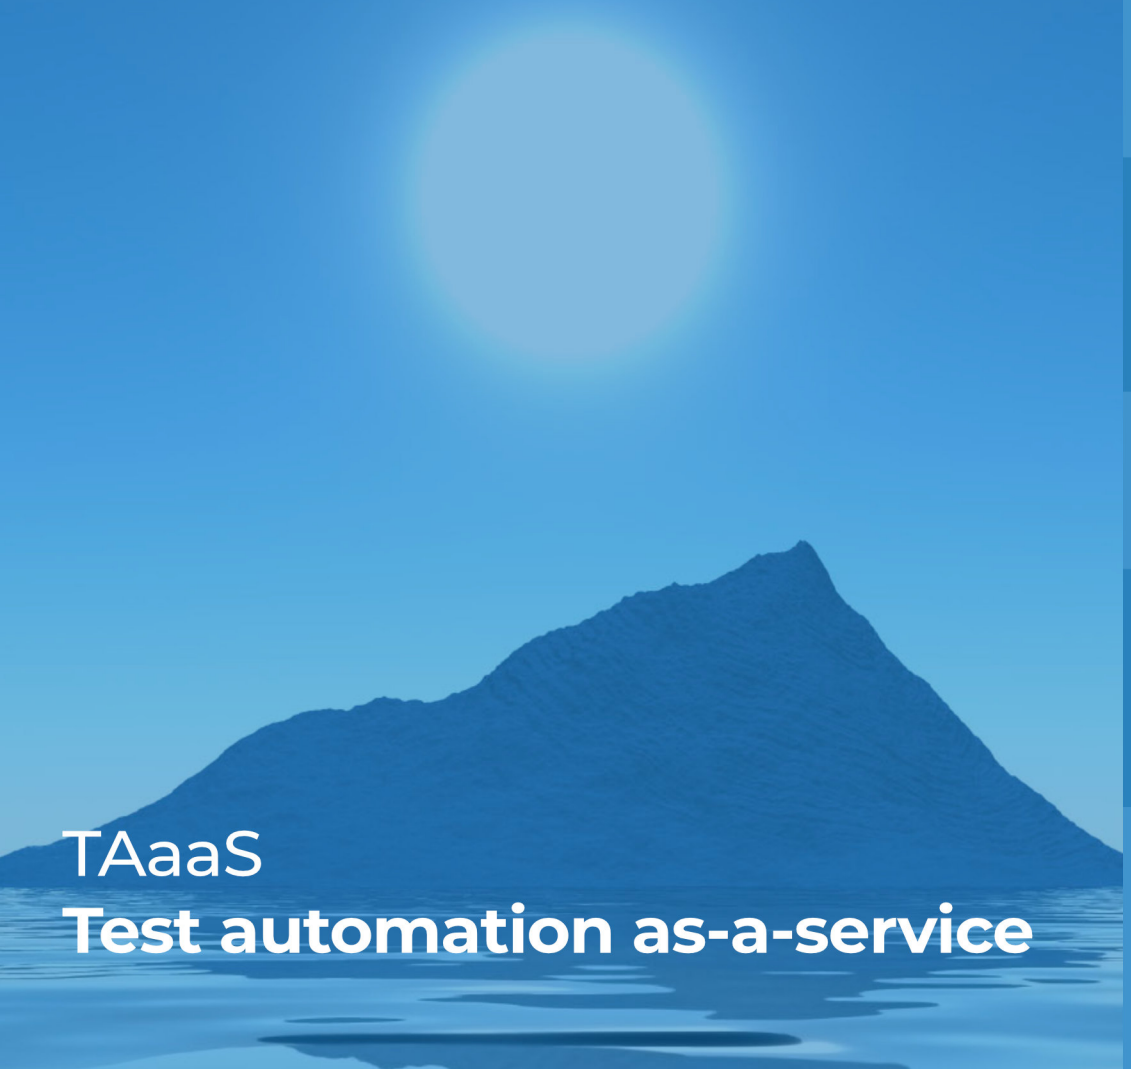
WHY KEEP IT GREEN?

- Industry- and field-independet TA project managment
- Plan, manage and report on test execution
- Central management instance for eggplant components
- High maintainability and reusability
- Out-of-the-box product solution (e.g. for the workplace)
- Enhanced Eggplant Programming (with unique methodology)

BENEFITS

- Investment protection
- Maximum efficiency in test automation
- Secure standard in test automation
- Auditing security
- Multiple use scalability
- Sustainability

KEEP IT GREEN
TEST AUTOMATION



TAaaS

Test automation as-a-service

KEEP IT GREEN
TEST AUTOMATION

Our methods and solutions in the field of test automation & RPA

Our "Keep IT Green" solutions rely on the technology-independent, non-invasive approach of eggplant that enables us to provide our customers the opportunity to select "Test automation as-a-service". Only VNC or RDP is required to access (via the GUI) an object to be tested without additional software installations. The customer decides whether his TA projects are delivered as a complete service or as a know-how transfer to build up an own internal "Competence Center".

TA STUDIO
KEEP IT GREEN

TA Studio - E2E testing via a single interface

"TA Studio" provides a simple, intuitive management and control interface for all test and RPA projects. "TA Studio" centralises all of your functional tests through different application and terminal levels so that in no time E2E test across technologies and endpoints can be conducted and controlled.

TESTSET WIN10
KEEP IT GREEN

TESTSET MOBILE
KEEP IT GREEN

Fully automated regression tests for WIN10 endpoints and mobile devices

Our test sets check system settings and basic functionalities of Office & collaboration applications in workplace management. The test sets Win10 for win10 end devices and mobile for iOS and Android devices include a set of predefined Office, Windows, and system-specific test cases. These "Out-of-the-box" test sets can be individually configured and used by customers at terminal level.
